This program is among the highest-rated Harvard Medical School CME courses
Dear Colleague,

In the past year, there have been a staggering number of critically important updates that need to be understood and incorporated into the practice of general internal medicine to ensure optimal patient care and outcomes.

The 40th Annual Intensive Review of Internal Medicine (IRIM) synthesizes this vast amount of information and presents it with efficiency and effectiveness to ensure that you are current with these updates and the best ways to incorporate them into practice.

For those of you who are preparing to certify or recertify, we complement this education with extensive board examination preparation and test-taking skills.

IRIM is the most comprehensive review offered by the clinical faculty of the Harvard Medical School. You can participate in as many as 125 clinical updates, case discussions, and board preparation sessions and practice runs.

In the course of a week, you get an accelerated, impactful and inspiring learning experience. Sessions and board preparation span all major fields of internal medicine and are led by Harvard Medical School’s most distinguished clinical faculty in each field.

Year after year, attendees report the experience to be “game changing” — invaluable to their clinical practice and exam preparation efforts.

We draw a national and international audience of clinicians and trainees. My co-directors and I hope you will join us for this rewarding educational experience.

**WHO ATTENDS**

Course Description

The **Intensive Review of Internal Medicine Course** enhances internal medicine knowledge by offering a comprehensive update in internal medicine and its subspecialties. It consists of a case-based review of challenging clinical problems and review of literature to guide evidence-based practice. This course can also serve to prepare attendees for the ABIM Board Examinations (Certification/Recertification) and offers daily board review question-and-answer practice sessions in each subspecialty, as well as a special session on maintenance of certification/practice exam. The program also offers daily case-based lectures and meet-the-faculty luncheons covering the most important topics in internal medicine. Throughout the course, emphasis will be placed on the practical application of physiological principles to the understanding and management of clinical problems and board exam preparation.

Learning Objectives

Upon completion of this activity, participants will be able to:
- Apply current/recommended guidelines in clinical practice
- Perform differential diagnosis of complex clinical presentations
- Identify/integrate current therapeutic options for specific disorders, including end-of-life care
- Review and interpret up-to-date literature relevant to clinical practice
- Describe pathophysiology as it applies to management of clinical problems
- Apply knowledge gained to the ABIM certification/recertification examinations
